

3) Stock Management System

The Stock Maintenance System will allow the Employee to record information, the items available in the shop and generate reports based on the total amount of sales. The new system will have a window based desktop interface to allow employees to enter the information of sales, purchase orders, change employee preferences & create reports. The system retains information on all the items in the shop the system retains the records of the cost, expiry date, vendor details, discount, quantity. The employee maintains the information of the sale of the item. He can add the items at the right time and update the database. The customer can view the availability of the required items & price of the items the customer can first view them but cannot make any changes.

The process of stock maintenance system is that the customer logs into particular site to place the order for the customer product. The stock maintenance system is described sequentially through steps.

- The customer logs into the particular site
- They fill the customer details
- They place the orders for their product
- The Vendor logs in & views the customer details & orders
