1) College Information System

problem Statement

Manual College Systems are paper-based and difficult to maintain. Expensive, more manpower required and unable to handle large records. the previous System was not efficient, not effective and there were issues of redundancy & Consistency.

The Use cases of System

* The management Unit (admin) can add students, faculties and members of other functional Units of college

* Educational institutions should be able to add, Edit and View Student academic details like USN, departement Semester & registered courses

* faculty Should be able to view all student personal details & should be able to View & Edit internal Evaluation marks & attendance of students

* The COE office Should be able to View all Student details, and add Companies comming to Examination marks & publish results

* placement section should be able to View all Student details, & add companies coming to the Campus for placements.

* Student should not be allowed to Edit their personal & academic details

* The System should be Convenient & easy to use by Students, management and faculty The system should be reliable source of information Viewing for Student, CO E & faculty
